Harry Hudson

Creative Technologist | AI-assisted game prototyping and interactive experiences

Worcester, UK | 07538 378308 | hhudson.creative@gmail.com | Portfolio: hjhudsonwriter.github.io

PROFILE

Creative technologist who builds games and interactive tools with generative AI. I have been building with AI tools for two years. I shape the idea, direct AI coding agents through MCP, and do the design, UI assembly and verification myself, so nothing ships that I cannot explain or reproduce. Current work is a solo Unreal Engine 5 management game with a C++ gameplay layer well under way and its interface in early iteration, an agent-assisted Blender workflow that has taken a grandstand asset from blockout into an Unreal scene, and a suite of browser tools for my own fantasy world, live and in testing with a small group of players. The writing came first: a 130,000-word novel, two D&D campaign series and the design documents the engine work runs on. Seven years in site and operations management, currently leading a team of 20+, is why the projects get scoped, tracked on a board and finished.

SKILLS AND TOOLS

- **Engines and creative tools:** Unreal Engine 5.7 and 5.8 (Blueprints, UMG, Enhanced Input, MetaHuman, level building, Fab asset pipelines), Blender via MCP, Meshy image-to-3D, Canva, Krita, FL Studio.
- **Generative AI and development:** Claude, Claude Code, MCP servers (Unreal, Blender), ChatGPT image generation, prompt and agent instruction design, HTML, CSS, JavaScript, JSON, SVG, Git and GitHub (Issues, Projects, Pages, LFS, gh CLI), Google Workspace, Power BI, Excel.
- **Design and production:** quest and narrative design, worldbuilding, UI layout and typography, scoping and ticketing, QA and verification of AI output, technical documentation.

PROJECTS

Lord & Lance | Solo developer and creative director, Unreal Engine 5.8 | July 2026 - Present

A medieval tournament management game: build a roster, manage an estate and run a tournament season. In development.

- Set the game design, visual canon, UI layouts and acceptance criteria. The C++ gameplay layer (economy, roster, tournament generation, hosting, simulation, seasons, save system, facilities, ledger) is implemented by directing Claude Code through an Unreal MCP server, and each change is checked against logs and diffs before it is committed.
- Assemble the UI screens in UMG (dashboard, roster, estate, tournaments, ledger) to a visual direction I set: a six-colour palette, three typefaces and painterly reference artwork made with ChatGPT image tools, with mock-ups in Canva.
- Set up character and asset pipelines from marketplace packs: a modular knight (39 skeletal meshes assembled with Leader Pose onto a horse system), a helmet crest pipeline, venue levels and menu scenes.
- Designed the jousting system: spline-locked lanes, two live inputs, a tactical pre-pass, stat-driven difficulty and animation-to-ragdoll unhorsing. Implementation is the next milestone.
- Wrote the requirements for, and directed the AI-assisted build of, the project's ticket system: a GitHub Kanban board with its own Verify column, tickets capped at 90 minutes so the work fits around a full-time job, and close reports that tie each acceptance criterion to a log, file or commit.

Blender + MCP workflow study | Agent-assisted 3D asset workflow

- Directed Claude Code through a Blender MCP server to take a grandstand asset from blockout to detailed geometry, reviewing each stage and directing revisions.
- Placed the result in an Unreal test scene as seven named static meshes with five material instances, and tested helmet crest variants in Unreal. This is a workflow and visual-integration study: collision, performance and export settings are still to be validated.

The Scarlett Isles Digital Suite | Designer, AI-assisted developer and sole tester | Ongoing

- Designed companion tools for my own D&D 5e setting and built them with AI-assisted development, now rebuilt under one burgundy-and-gold visual identity with shared navigation: a world explorer with regional maps, party markers and travel events, a combat tracker with battlemap and a crest creator, plus a quest generator, base manager and minigames. Live on GitHub Pages and in testing with a small group of players.
- I am the only QA on every release: faults are reproduced, isolated, documented and fixed, with an issue list per tool and planned features kept separate from bugs. For example, the old combat tracker clipped condition labels beside the Remove button, so the rebuild gives conditions their own column.
- Preparing the wider setting for release as a product line on DriveThruRPG: world guide, atlas and map pack, first campaign and the digital suite.

Original IP and writing | Author and worldbuilder

- A Kingdom of Splinters, a 130,000-word fantasy novel written over three years and professionally edited, publishing as H.J. Hudson.
- The Scarlett Isles, developed from the novel into two D&D campaign series with branching quests, NPCs and dialogue.

PROFESSIONAL EXPERIENCE

CEVA Logistics (Jaguar Land Rover site) | First Line Manager | 2022 - Present
Seconded as Health & Safety Officer since January 2026

- Lead a team of 20+ in automotive warehousing and manufacturing, owning performance, quality, scheduling and day-to-day people management.
- Used Power BI and operational data to find bottlenecks worth a 10% gain in throughput efficiency, and lifted team productivity by 15% through training and clearer ways of working.
- On secondment, building the site's health and safety processes, documentation and reporting where little existed, and getting busy teams to adopt them.

AMS Music Group | Freelance A&R Associate | 2016 - Present

- Freelance A&R for an independent music group, alongside eight years producing and mixing hip-hop and R&B in FL Studio. Work recognised by BBC Introducing.

Chasetown Civil Engineering | Site Supervisor | 2021 - 2022

- Coordinated labour, workflow and logistics for sites with up to 100 operatives, ran the inspection and maintenance regime, and was the point of contact between subcontractors, operations and plant providers.

Barratt Homes | Assistant Site Manager | 2019 - 2021

- Managed subcontractors on live projects, running inductions, RAMS reviews, snagging and customer handovers to a high quality standard.

Barclays | Asset Finance Case Manager | 2018 - 2019

- Managed commercial client portfolios in a regulated environment where accurate records were the whole job.

British Army | Lance Corporal, Electronic Warfare Systems Operator | 2014 - 2018

- Operated complex electronic systems under pressure, wrote precise briefs for senior officers and held DV clearance. Represented the UK Armed Forces on multinational exercises.

EDUCATION AND CERTIFICATIONS

- BTEC Level 3 Diploma, Information Technology, British Army Apprenticeship
- Epic Games Unreal Engine 5 designer learning track, self-directed, in progress
- IOSH Managing Safely, in progress
- NVQ Level 4 Construction Site Supervision, City & Guilds / NHBC
- 10 GCSEs A* to C, South Bromsgrove High School

ADDITIONAL INFORMATION

Based in Worcester; open to remote and hybrid working. Full UK right to work. Largely self-taught: everything in the projects section was learned on live builds around a full-time job.
