

# Harry Hudson

Creative Technologist | AI-assisted development and interactive experiences

Worcestershire, UK | 07538 378308 | [harryhudson93@hotmail.co.uk](mailto:harryhudson93@hotmail.co.uk)

**Portfolio:** [hjhudsonwriter.github.io](https://hjhudsonwriter.github.io) | [github.com/hjhudsonwriter](https://github.com/hjhudsonwriter)

## PROFILE

Creative technologist developing games and interactive tools through AI-assisted workflows. I define the brief, direct coding agents through MCP, and carry out design, UI assembly and verification. Current work includes an Unreal Engine management game in active development, a Blueprint quest prototype and a published suite of browser tools for my original fantasy setting. My writing spans a 130,000-word novel and two D&D campaign series. Eight years leading operational teams of 20+ informs how I scope tasks, organise delivery and review results.

## SKILLS AND TOOLS

- Engines and creative tools: Unreal Engine 5.7 and 5.8 (Blueprints, UMG, Enhanced Input, MetaHuman, level building, Fab asset pipelines), Blender via MCP, Meshy image-to-3D, Canva, Krita, FL Studio
- AI and development: Claude Code, MCP servers (Unreal, Blender), ChatGPT image generation, prompt and agent instruction design, HTML, CSS, JavaScript, JSON, SVG, Git and GitHub (Issues, Projects, Pages, LFS, gh CLI), Google Workspace, Power BI, Excel
- Design and production: quest and narrative design, worldbuilding, UI layout and typography, scoping and ticketing, QA and verification of AI output, technical documentation

## PROJECTS

### Lord & Lance | Solo developer and creative director | Unreal Engine 5.8 July 2026 to present

A medieval tournament management sim. The first phase is management only, so the UI carries the game.

- Developing the C++ management systems through Claude Code and Unreal MCP, covering economy, roster, tournaments, seasons, facilities, ledger and messaging. Implementation and verification continue through scoped tickets, logs and diffs.
- Designing and assembling five UMG screens: dashboard, roster, estate, tournaments and ledger. I set the visual direction, prepare reference mockups and direct artwork; the production interfaces remain under active iteration.
- Set up the character and asset pipelines from marketplace packs: a modular knight (39 skeletal meshes assembled with Leader Pose onto a horse system), a helmet crest pipeline with two crests shipped and Meshy-generated meshes queued, plus venue levels and menu scenes.
- Designed the jousting system, with spline-locked lanes, two live inputs, a tactical pre-pass, stat-driven difficulty and animation-to-ragdoll unhorsing, and a two-track build plan. Documented as future implementation while management development continues.
- Designed a GitHub Kanban and ticketing workflow with explicit ownership, acceptance criteria, review gates, session records and a 90-minute ceiling per ticket, enabling AI-assisted work around a full-time job.

### The Drowned Envoy | Quest design portfolio piece | Unreal Engine 5.7, Blueprint-only June 2026 to present

A 15 to 25 minute investigation quest in the port town of Swyth: four zones, three key NPCs, a two-ring rune puzzle, one combat encounter, two endings. Blueprint-only by choice, so every system can be explained in an interview.

- Wrote the Quest Design Document the build runs on (dialogue, clue items, puzzle logic, quest stage strings, both endings), then turned it into an eight-phase build brief for the AI agent covering the quest manager, clue objects, objective tracker, three-tab journal, data-driven dialogue, puzzle, combat and endings.
- Built so far: an interface-based interactive object system, character Blueprint with locomotion, HUD and journal widgets, Enhanced Input, a MetaHuman hero and a playable route from the town entry to Tidepool House in final assets, with the remaining zones greyboxed.
- Wrote two reusable prompt libraries (16 Blueprint tutorials, 13 materials) and sourced assets free-first from Quaternius, Kenney and Megascans, buying only where the gaps were real.

### The Scarlett Isles Digital Suite | Designer, developer and sole tester | GitHub Pages Ongoing

- Designed and shipped companion tools for my own D&D 5e setting using AI-assisted development end to end: a virtual tabletop with encounter tracker, a quest generator, a multi-map world explorer with hex grid, a base manager, an honour tracker, an SVG crest generator and playable minigames.

- I am the only QA on every release. Faults are reproduced, isolated, documented and fixed, with an issue list per tool, planned features kept separate from bugs, and versioned releases.
- Packaging the wider setting as a product line for DriveThruRPG: world guide, atlas and map pack, first campaign and the digital suite.

### **Original IP and writing**

- A Blessed Lie, a 130,000-word fantasy novel written over three years and professionally edited, publishing as H.J. Hudson.
- The Scarlett Isles, developed from the novel into two D&D campaign series with branching quests, NPCs and dialogue. The Drowned Envoy and the Digital Suite are both built on it.

## **PROFESSIONAL EXPERIENCE**

### **CEVA Logistics, Jaguar Land Rover Solihull 2022 to present**

First Line Manager; seconded as Health & Safety Officer since January 2026

- Lead a team of 20+ in automotive warehousing and manufacturing, owning performance, quality, scheduling and day-to-day people management.
- Used Power BI and operational data to find bottlenecks worth a 10% gain in throughput efficiency, and lifted team productivity by 15% through training and clearer ways of working.
- On secondment, building the site's health and safety processes, documentation and reporting where little existed, and getting busy teams to adopt them.

### **AMS Music Group | Freelance A&R Associate 2016 to present**

- Freelance A&R for an independent music group, alongside eight years producing and mixing hip-hop and R&B in FL Studio. Work recognised by BBC Introducing.

### **Chasetown Civil Engineering | Site Supervisor 2021 to 2022**

- Coordinated labour, workflow and logistics for sites with up to 100 operatives, ran the inspection and maintenance regime, and was the point of contact between subcontractors, operations and plant providers.

### **Barratt Homes | Assistant Site Manager 2019 to 2021**

- Managed subcontractors on live projects, running inductions, RAMS reviews, snagging and customer handovers to a high quality standard.

### **Barclays | Asset Finance Case Manager 2018 to 2019**

- Managed commercial client portfolios in a regulated environment where accurate records were the whole job.

### **British Army | Lance Corporal, Electronic Warfare Systems Operator 2014 to 2018**

- Operated complex electronic systems under pressure, wrote precise briefs for senior officers and held DV clearance. Represented the UK Armed Forces on multinational exercises.

## **EDUCATION AND CERTIFICATIONS**

- Epic Games Unreal Engine 5 designer learning track, self-directed, in progress
- IOSH Managing Safely, in progress
- NVQ Level 4 Construction Site Supervision, City & Guilds / NHBC; SMSTS; CSCS Gold Card (Supervisor)
- BTEC Level 3 Diploma, Information Technology, British Army Apprenticeship
- 10 GCSEs A\* to C, South Bromsgrove High School

## **ADDITIONAL INFORMATION**

- Based in Worcestershire; open to hybrid and remote working. Full UK right to work.
- Largely self-taught. Everything in the projects section was learned on live builds around a full-time job.
